

The Asia-Pacific Society for Computers in Education (APSCE) was formed on 1 January 2004. It is an independent academic society whose broad objective is to promote the conduct and communication of scientific research related to all aspects of the use of computers in education, especially within the Asia-Pacific.

APSCE evolved from the Asia-Pacific Chapter (APC) of the Association for the Advancement of Computers in Education (AACE).

The objectives of APSCE are:

- a) To promote the conduct and dissemination of research employing the use of computing technologies in education within the Asia-Pacific region and internationally;
- b) To encourage and support the academic activities of researchers in member countries and to nurture a vibrant research community of younger as well as more experienced researchers;
- c) To enhance international awareness of research conducted by researchers in member countries;
- d) To obtain greater representation of active researchers from the Asia-Pacific region in committees of related leading academic and professional organizations and the editorial boards of reputable journals;
- e) To organize and hold the *International Conference on Computers in Education* (ICCE) conference series in member countries;
- f) To engage in other appropriate academic and professional activities including but not limited to the setting up of Special Interest Groups (SIGs) and the publication of a Society e-newsletter and a Society journal.

ICCE Annual Conferences, which are held in the Asia-Pacific Region, are leading international fora for reporting current research in the field of computers and education. The conferences provide the opportunity for the exchange of information and ideas on related research, development and applications. Society members receive reduced registration rates for ICCE conferences. APSCE encourages young researchers with reduced membership and conference fees to be a part of its academic community. ICCEs organise special sessions for post-graduate researchers to present their current research in progress.

ICCE2004 will be held in Melbourne, Australia from Nov. 30 – Dec. 3.  
Conference theme: Acquiring and Constructing Knowledge Learning Through Human-Computer Interaction: Creating new visions for the future of learning.
